

## **Seoul Meeting Records**

### Summary of Discussion

Scientific databases must be developed under collaboration of wet and dry scientists.

Asian databases must be unique to Asian countries and peoples, different from EuroCarbDB and CFG-DBs.

Eastern and Western peoples are genetically different. Then, biomarkers and therapeutic targets might be different between Eastern and Western people. And also, our response for drug might be different.

Peoples in East Asia are almost same in biologically. Indian people are different in ancestor. So, let's construct Asia-unique databases.

Indian delegate, leaving out at this time, should be called at next meeting. India has a quite a lot people of informatics. They might take a different approach all together.
